| System Objective | Measure of Effectiveness (MOE) |
|--|--|
| Acquire Data for Dropsonde Acceleration and Location | Successful retrieval of data from dropsondes |
| Survive Suborbital Flight and Landing | Dropsondes survive drop tests (e.g. buildings) to qualify reentry, while deployer with dropsondes should survive imposed random vibrate/shock/thermal environments given in PM ERD |
| Successfully integrate with LV/APL Units | Deployer fits the volume constraints given by the PM, while also successfully interfacing electrically and mechanically with the APL JANUS system |
| Achieve Total Development Cost <\$5,000 | Total system cost (dropsondes, deployer, testing, etc.) <\$5,000 |

| Parameters | Option A: Aerogel capsule reentry technology demonstration | Option B: Custom Built Transmitter Chipsat/Sensor Array System |
|------------------------------|--|--|
| Temperature Requirements | High Range (Based on Aerogel) | Medium Range (Based on Electronics) |
| Manufacturability | Easily manufacturable | Moderate difficulty in manufacturing |
| Cost (Money) | Lowest cost | Highest Cost |
| Cost (Time) | Lowest time needed | Most time needed |
| Data Validity | Materials technology info only | Most valid data expected |
| Recoverability | More difficult to recover | Easier to recover, transmitter on board |
| Mass/Weight/Density | Lowest expected payload mass | Moderate expected payload mass |
| TRL | 6-7 | 4-5 |
| Risk (To Mission Objectives) | Moderate | Moderate-Low |

Lower Risk

Moderate Risk

Higher Risk

Option A

- Limited scientific return.
- Greater risk of losing probe.
- Less risk of electronics failures.
- Less risk of schedule slip.

Questions?

Smead Aerospace
UNIVERSITY OF COLORADO BOULDER

- 1. $\{y_j\}_{n=1}^{\infty}$ is a sequence of independent random variables with the same distribution as Y_1 . The sum $S_n = Y_1 + Y_2 + \dots + Y_n$ is a random variable with the same distribution as S_1 .
- 2. $\{Y_j\}_{j=1}^{\infty}$ are independent random variables with the same distribution as Y_1 . The sum $S_n = Y_1 + Y_2 + \dots + Y_n$ is a random variable with the same distribution as S_1 .
